

Skrei

Lofoten Fisheries Heritage Centre

Project description on the island

In Storvågan a new centre will be realised within 2014. In the centre there will, among other functions, be a museum, public areas, facilities for scientists and showroom for sustainable development.

Targets of the project

Cooperation between the Municipality of Vågan, the regional Government of Nordland and five National Departments, shall give a new standard of sustainable building methods, new energy supply from Tidal Power/ Morild Technology and increased use of clean energy for transportation.

Innovation and value of the project

The Storvågan area, and surrounding areas, will be implemented with new infrastructure. New businesses and new areas for homes will be created. The project is to be regarded as an important part of the possible coming World Heritage Site of Lofoten (Culture and Nature). Eco-tourism will be developed as the most important industry in the area.

Start and end date of the project

January 2009 - 2015
